The screenshot displays the phpMyAdmin web interface in a browser window. The address bar shows the URL `localhost/phpmyadmin/`. The interface includes a top navigation bar with tabs for Databases, SQL, Status, User accounts, Export, Import, Settings, Replication, Variables, Charsets, and More. The main content area is divided into several panels:

- General settings:** Displays the server connection collation as `utf8mb4_unicode_ci`.
- Appearance settings:** Shows the language set to English, the theme as `pmahomme`, and the font size at 82%.
- Database server:** Provides details about the server connection, including the server type (MariaDB), version (10.1.33-MariaDB), protocol version (10), user (root@localhost), and server charset (UTF-8 Unicode (utf8)).
- Web server:** Lists the web server configuration, including Apache/2.4.17 (Win32) OpenSSL/1.0.2d PHP/5.6.19, the database client version (libmysql - mysqlnd 5.0.11-dev - 20120503 - \$Id: 76b08b24596e12d4553bd41fc93cccd5bac2fe7a \$), the PHP extension (mysqli), and the PHP version (5.6.19).
- phpMyAdmin:** Shows version information (4.5.1, latest stable version: 4.9.5) and links to documentation, Wiki, Official Homepage, Contribute, Get support, and List of changes.

A sidebar on the left lists recent and favorite databases, including 4th\_year\_lab, address\_book, adm17, app-db, app-server, asdf, auth, backpack, bangladesh, batayon, bcs2, bsc, bsfmstu\_admission, cdcol, cicdb2014, corona\_care, cse14, cse\_guest\_house, dms, eb\_2019, and cs\_bk\_dictionary.

# Run basic SQL query

---

Demo

# SQL

- **Structures Query Language**
- developed at IBM by **Donald D. Chamberlin** and **Raymond F. Boyce** for their database software “System R” in 1970
- **Oracle** made it popular.
- By 1986, ANSI and ISO officially adopted the SQL and standard Language for RDBMS.

# SQL

ORACLE®

SYBASE®  
An SAP Company

INGRES™

HyperSQL

Informix®

# Basic SQL Query

- For getting all data from a specific table

**SELECT \* FROM <table\_name>**

**SELECT \* FROM instructor**

ID	name	dept_name	salary
10101	Srinivasan	Comp. Sci.	65000.00
12121	Wu	Finance	90000.00
15151	Mozart	Music	40000.00
22222	Einstein	Physics	95000.00
32343	El Said	History	60000.00
33456	Gold	Physics	87000.00
45565	Katz	Comp. Sci.	75000.00
58583	Califieri	History	62000.00
76543	Singh	Finance	80000.00
76766	Crick	Biology	72000.00
83821	Brandt	Comp. Sci.	92000.00
98345	Kim	Elec. Eng.	80000.00

# Basic SQL Query

- Showing only selected fields

```
SELECT  
    field1,field2,...fieldn  
FROM  
    <table_name>
```

```
SELECT name, dept_name FROM instructor
```

name	dept_name
Srinivasan	Comp. Sci.
Wu	Finance
Mozart	Music
Einstein	Physics
El Said	History
Gold	Physics
Katz	Comp. Sci.
Califieri	History
Singh	Finance
Crick	Biology
Brandt	Comp. Sci.
Kim	Elec. Eng.

# Basic SQL Query

- Filtering data based on condition

```
SELECT  
    field1,field2,...fieldn  
FROM  
    <table_name>  
WHERE  
    <condition>
```

```
SELECT * FROM instructor  
WHERE dept_name='Comp. Sci.'
```

	ID	name	dept_name	salary
e	10101	Srinivasan	Comp. Sci.	65000.00
e	45565	Katz	Comp. Sci.	75000.00
e	83821	Brandt	Comp. Sci.	92000.00

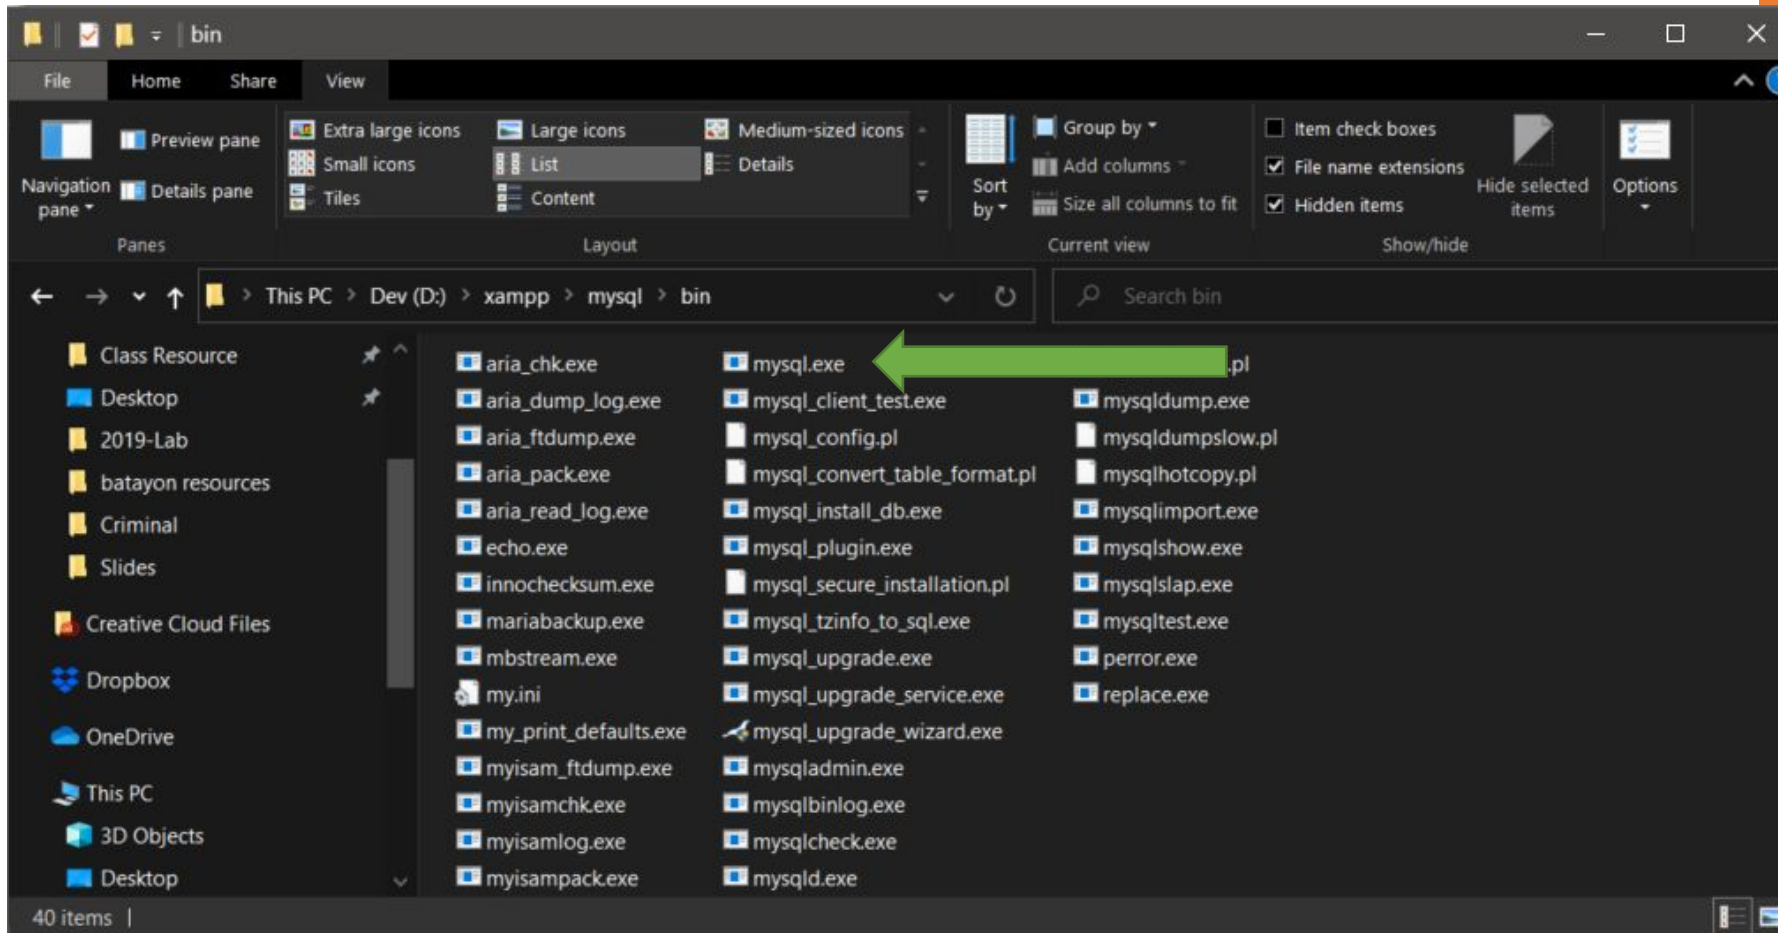

# Some Additional Tools

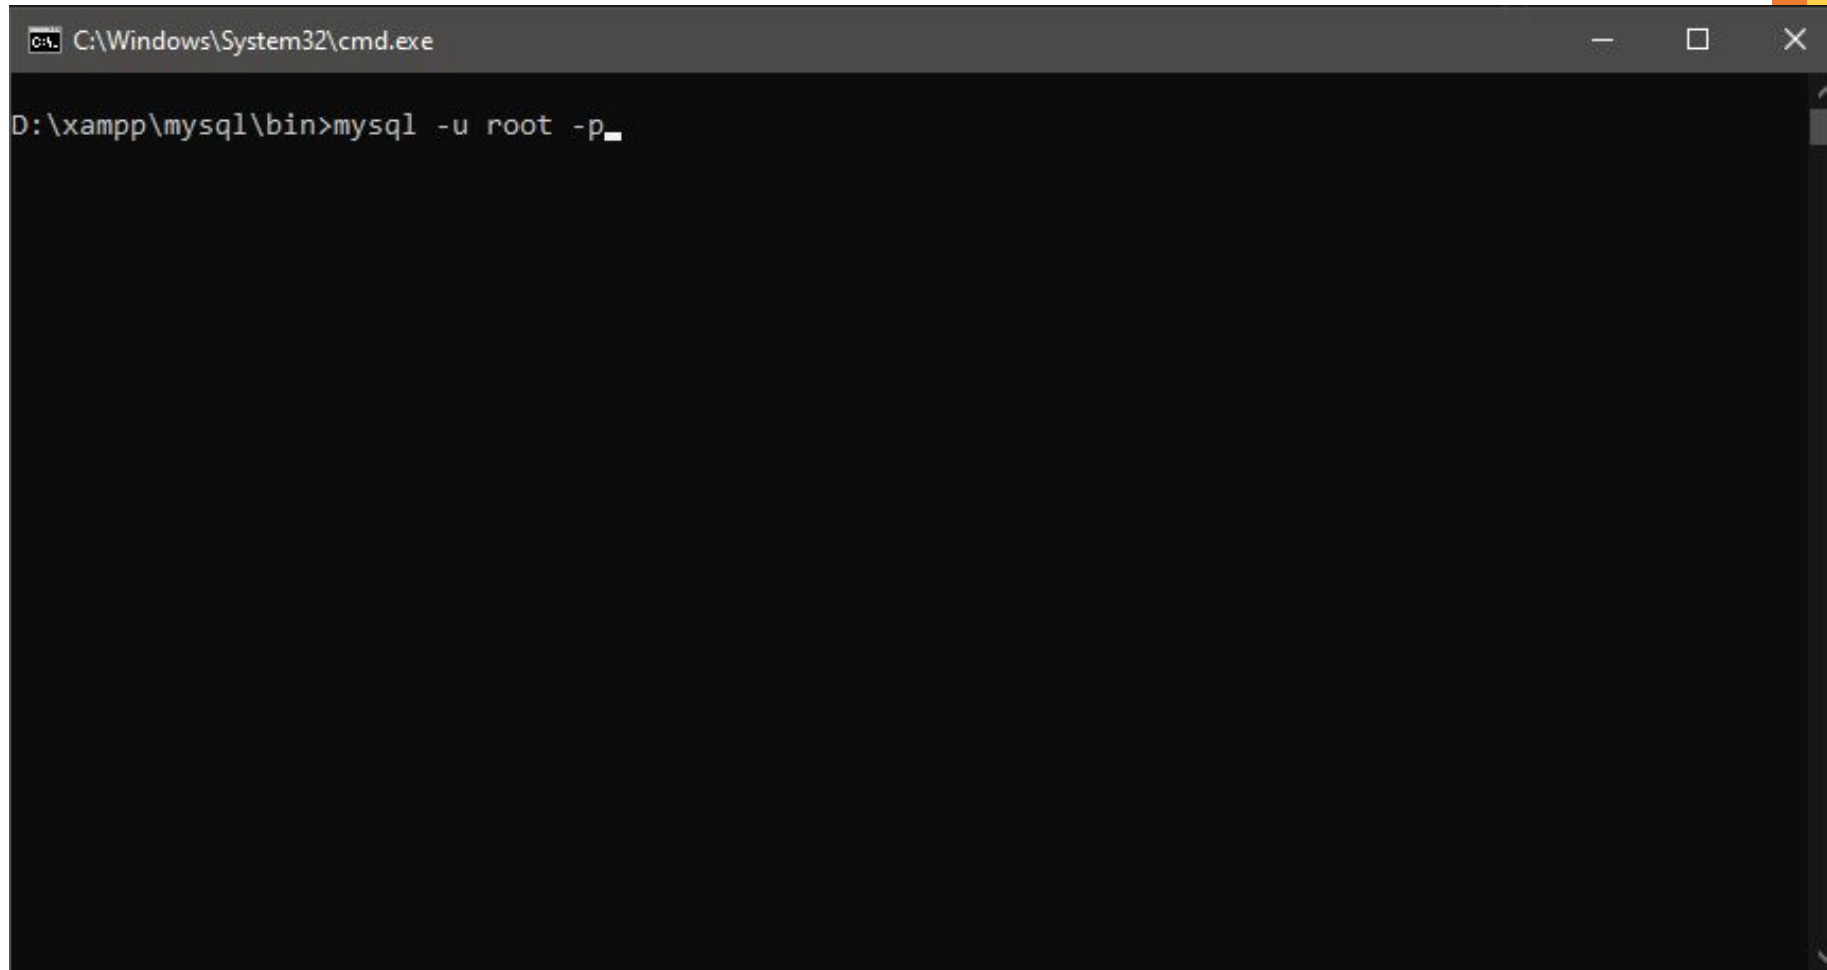

# 5. Locate mysql within XAMPP

C:\xampp\bin\mysql\bin

## 6. Using command prompt run mysql

```
mysql -u root -p
```

A screenshot of a Windows Command Prompt window. The title bar shows 'C:\Windows\System32\cmd.exe'. The command prompt shows the directory 'D:\xampp\mysql\bin' and the command 'mysql -u root -p' being entered. The cursor is at the end of the command.

## 6. Using command prompt run mysql

```
mysql -u root -p
```

```
C:\Windows\System32\cmd.exe - mysql -u root -p

D:\xampp\mysql\bin>mysql -u root -p
Enter password:
Welcome to the MariaDB monitor.  Commands end with ; or \g.
Your MariaDB connection id is 225
Server version: 10.1.33-MariaDB mariadb.org binary distribution

Copyright (c) 2000, 2018, Oracle, MariaDB Corporation Ab and others.

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.

MariaDB [(none)]> _
```

## 7. Run some query on the db server

- Show available databases

```
show databases;
```

- Open a database

```
use <database_name>;
```

- Show tables on opened database

```
show tables;
```

## 7. Run some query on the db server

- Show schema of a table

```
describe <table_name>;
```

```
desc <table_name>;
```

☐ short form

- Show records from a database

```
select * from <table_name>;
```

## 7. Run some query on the db server

```
show databases;
```

```
use <database_name>;
```

```
show tables;
```

☐ short form

```
describe <table_name>;
```

```
desc <table_name>;
```

```
select * from <table_name>;
```

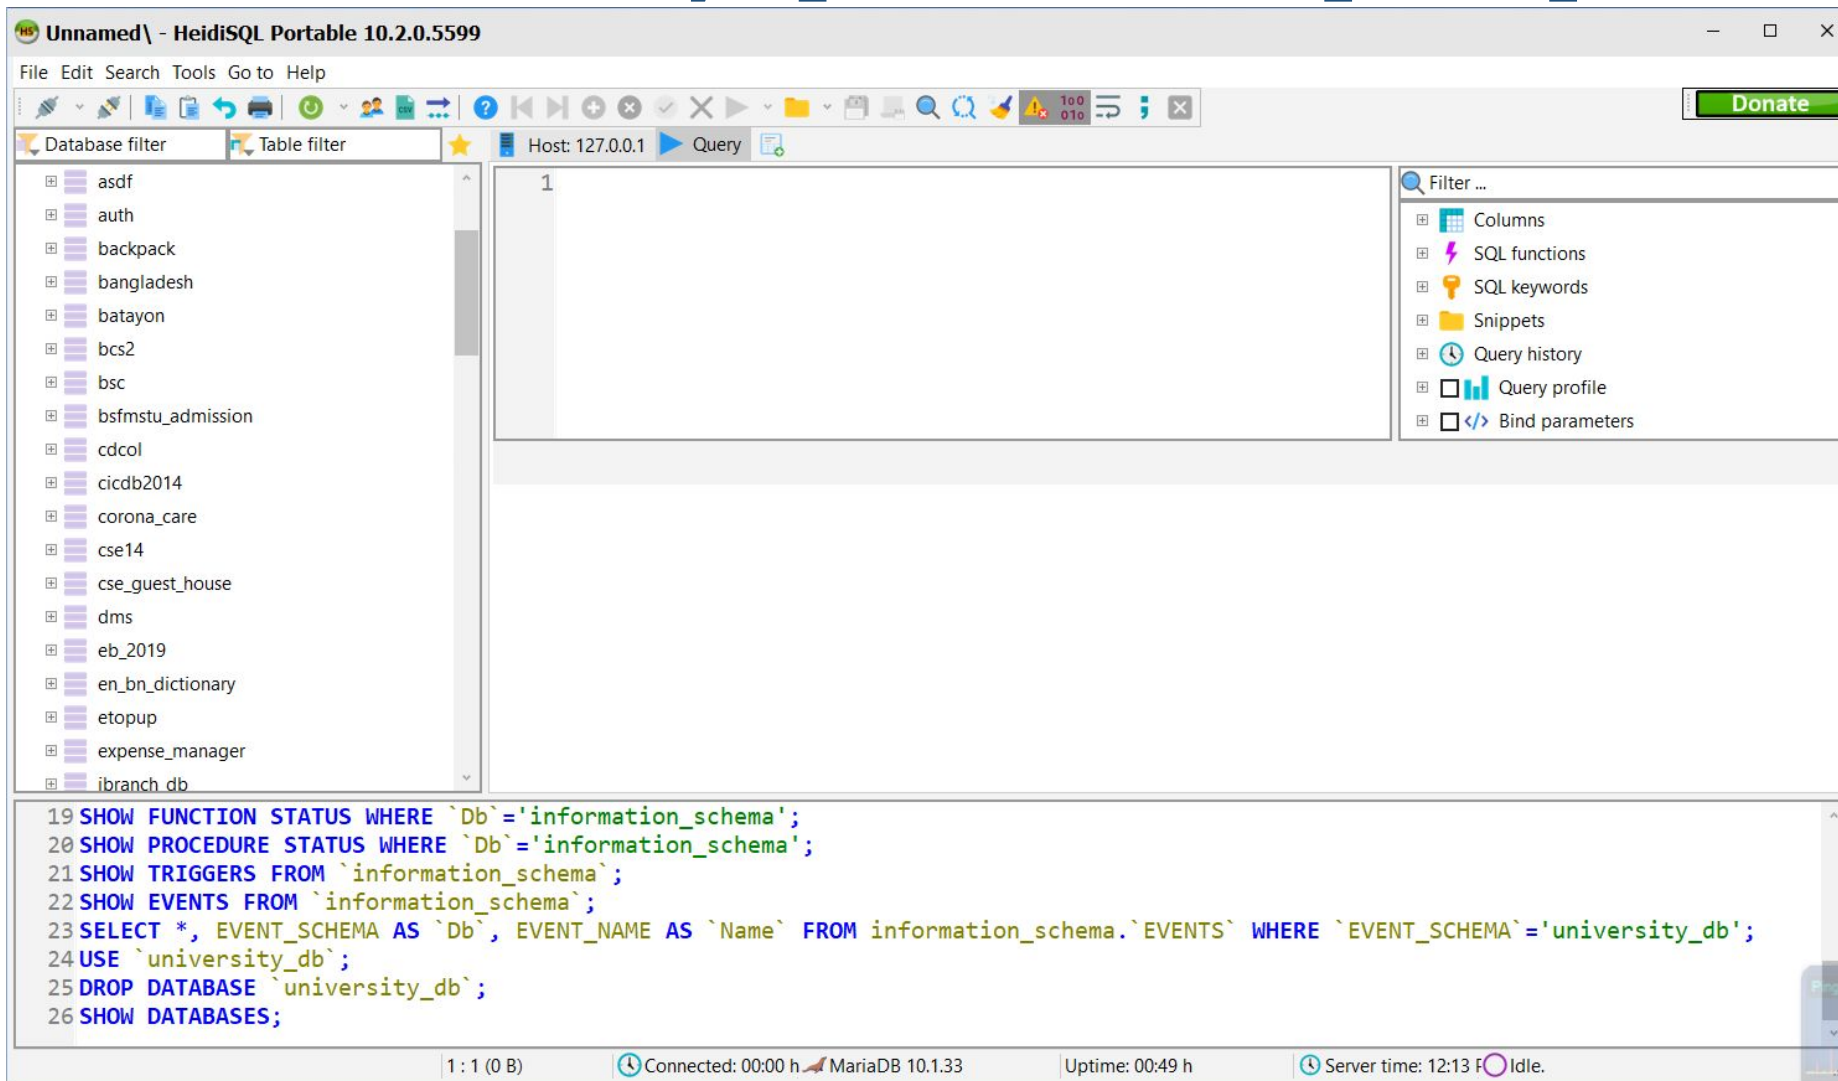

## 8. Add mysql to windows env path for easy access

Add your mysql path  
`c:\wamp\bin\mysql\mysql###\bin;`  
At the end of the Variable value

Test if everithing is OK  
Open comand prompt anywhere and type  
“mysql”  
Without the quotation mark

# I not like mysql command prompt

17/05/2020 2:32 PM

# Demo.

---

# End.

---
